

Special High Bond Adhesive Mortar Special type for fiber cement sheet **M502**

Usage amount of Mortar for area 1m²

Thickness of plastering (mm.)	Amount of mortar (kg.)
1-3	1.7

TPI M502 has very high bond adhesion mortar for bonding ber cement board for both outdoor and indoor application. After mixing, it gives adequate time for tile adjustment and easy to apply. Save time and money.

Instruction of preparation and application

1. Clean the substrate surface and ber cement board, smooth roof tile or double roman tile which to be tiling and to ensure they are clean and free from dust and any other contaminates to disturb the adhesive strength of mortar.
2. Mix 1 bag (1kg) TPI M501 with 0.4 liters of clean water until the mixture is homogenous.
3. Apply the mixture with a thin layer approximately 1-3 mm thickness onto the substrate surface which required to be bonding together.
4. Lay tiles onto the substrate surface then press or use the rubber hammer to it rmly.

Suitable for bonding Fiber cement sheet, Smooth roof tile and Double roman roof tile with Flexible and High bond adhesive strength.
